

NULLFORGE

Securing your presense in the cloud

About Nullforge

NullForge Security, Inc. is a premier cybersecurity company helping businesses protect their data, people, and their brands. Our passion and dedication to cybersecurity greatly reduce security risks and enable companies to focus on their core business.

Founded by a group of security professionals with strong enthusiasm and dedication to IT Security; NullForge provides the following best in class security services: Penetration Testing, Vulnerability Assessment, Red Team Assessment, and Cyber Security Consulting.

NullForge's co-founders and core team members are active in the Information Security community and are also heavily involved in organizing ROOTCON, a premiere hacking conference in the Philippines.

Mission / Vision

Mission, Vision

To globally provide top-notch quality and cost effective security testing and consulting.

Core Values

We are passionate and well-driven to providing utmost security testing in the market. We believe in Quality, Trust and Integrity.

Community Involvement

- * Blackhat Singapore Review Board Member
- * ROOTCON Organizers
- * Metasploit Contributor
- * FreeBSD Contributor
- * Seclist Contributor
- * PfSense Contributor

Competencies

Solid Experience

Our team has 15 years of solid experience in security testing.

Certifications

CEH, CISSP, OSCP, CPT, ECSA, GSec

Services

Today, there is no denying that technology plays a big role in our society. We live in a digitally connected era. Government, Academic, Financial Sectors you name it. Internet is truly a marvel that each one of us benefits from but also, a place where threat actors and us, co-exist.

Each organization's assets and resources is unique but certainly valuable and often considered priceless, but there is a common ground; each can be a target and the reason why organizations should not ignore security. Knowing the security posture and vulnerabilities must be a goal of every organization. Performing security testing and securing resources before the actual attack is the way to go; it is not a matter of IFs but a question of WHEN an actual attack will occur. Maybe, you already got hit but you didn't know how and when.

NullForge Security, Inc. is a premier cybersecurity company helping businesses protect their data, people, and their brands. Our passion and dedication to cybersecurity greatly reduce security risks and enable companies to focus on their core business.

Founded by a group of security professionals with strong enthusiasm and dedication to IT Security; NullForge provides the following best in class security services: Penetration Testing, Vulnerability Assessment, Red Team Assessment, and Cyber Security Consulting.

NullForge's co-founders and core team members are active in the Information Security community and are also heavily involved in organizing ROOTCON, a premiere hacking conference in the Philippines.

Our Offerings

Penetration Testing

High security maturity can be verified by Nullforge by employing mixed type of attack scenarios with industry-recommended tools to test the effectiveness of your security. The sole objective of this test is to gain access to critical resources.

Vulnerability Assessment

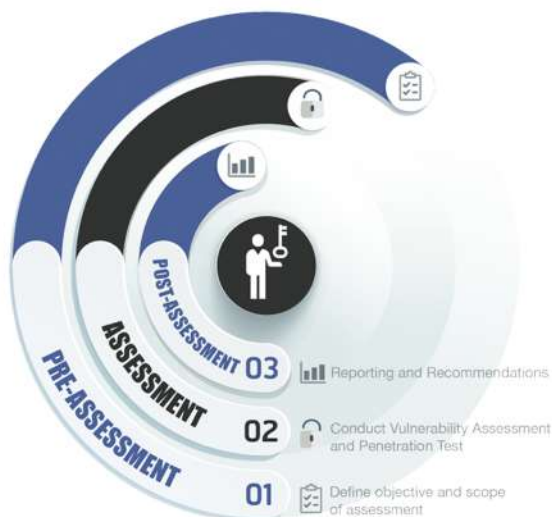

Nullforge offers this service as a standalone assessment or as a supplement after a penetration test engagement. This phase of security implementation is to ensure all common exposures are identified. Our team performs this assessment in a secure public server with industry-leading security assessment tools, during reporting process, we ensure all false-positive findings are eliminated.

Red Team

High-grade firewalls, intrusion detection systems and other security appliances are just part of the security onion approach, but what about the human aspect of security? Our red team assessment ensures that we cover other areas of security, such as publicly available wireless access points, social engineering attacks, physical security and targeted attacks.

Information or data or intelligence is gathered to assist in guiding the assessment actions. The information gathering process is conducted to gather information about the web application, mobile application and network perimeter.

Vulnerability Analysis is used to identify and evaluate the security risks posed by identified vulnerabilities on the web application, mobile application and network perimeter of our clients. Nullforge Vulnerability Analysis is divided into two steps Identification and Validation.

Nullforge will attempt to exploit all vulnerabilities found on the web application, mobile application and network perimeter of our clients.

Understand the true strength and effectiveness of physical security controls in data centers, offices, substations, critical infrastructure and more. The use of deception to manipulate the clients individuals into divulging confidential or personal information that may be used to successfully compromise the target.

Engagements

Our past engagements provides a solid proof of Nullforge Security skills and process.

Industries involved:

Oil & Gas
FMCG
Energy Company
Job Search
Secular
Financial Institution

Objective:

Identify any highly critical vulnerability and misuse of its point system.

Result:

Vulnerabilities in web applications allows for points to be added to accounts of any user which can then be redeemed. Client sensitive information was also exposed (e.g. PII Informations)

MAJOR OIL
&
GAS COMPANY

EXPRESSWAY
TOLL MANAGEMENT
SYSTEM

Objective:

Identify possible ways of manipulating the toll system – e.g. free access, card deactivation.

Result:

Vulnerabilities in API, web and mobile application allows an attacker to perform arbitrary reloading to any Expressway accounts.

LEADING
ENERGY
COMPANY

Objective:

Conduct Proof of Value for the client.

Result:

Nullforge was able to break-in to CCTV cameras across major stations of the company.
